

With the help of Dr. **Jean-François Virolés**, I've established a list of differential diagnosis that exists for ALS:

- Heavy metal poisoning
- Neurological form of Lyme disease (*neuroborreliosis*)
- Guillain-Barré syndrome
- Motor neuropathy
- Muscle weakness (*myasthenia*)
- Post-polio syndrome
- Cramp fasciculations syndrome
- Paraneoplastic syndrome
- Sjögren's syndrome
- Some endocrine disorders
- Retroviral infections
- Some metabolic disorders
- Genetic conditions (Kennedy's syndrome and spinal muscular atrophy)
- Inclusion body myositis
- Some spinal-cord compression disorders

With the stacks of rare diseases in this world, I'm sure there's gotta be more to include here, but these are the most common ones.

Have a nice day.
